

How a payment moves through the Unified Payments Interface

Messages travel between the payer app, the two PSPs and UPI, while the money itself moves between the remitter and the beneficiary bank.

1. Initiate payment — the payer starts the transaction in the payer app.

4. Authorize success — the payee PSP confirms authorization.

7. Instruct credit — UPI instructs the beneficiary bank to credit the payee.

10. Confirmation — the payer PSP receives the transaction confirmation.

2. Request payment — the payer PSP raises the request with UPI.

5. Instruct debit — UPI instructs the remitter bank to debit the payer.

8. Credit success — the beneficiary bank confirms the credit.

11. Transaction confirmation — UPI confirms the transaction to the payee PSP.

3. Authorize payee — UPI asks the payee PSP to authorize the transaction.

6. Debit success — the remitter bank confirms the debit.

9. Payment success — UPI reports success to the payer PSP.
